

Canyon Park Water Supply Corporation
482 Huckleberry | PO Box 1928
Onalaska, TX 77360

June 23rd, 2025

Our Canyon Park Water Supply customers,

The Canyon Park WSC Board of Directors is pleased to provide the enclosed Texas required Consumer Confidence Report (CCR) that provides necessary testing results for our system for the year 2024.

If anyone requires any information regarding the Consumer Confidence Report, you can reach someone in the water office at 936-646-3529.

Thank you,

Jim Marxen
Office Coordinator
936-646-3529
Canyon Park Water Supply Corporation

2024 Consumer Confidence Report for Public Water System CANYON PARK WSC

This is your water quality report for January 1 to December 31, 2024

CANYON PARK WSC provides ground water from Gulf Coast Aquifer located Onalaska, Polk County, Texas

For more information regarding this report contact:

Name Jim Marxen

Phone 936-646-3529

Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al telefono (936) 646-3529.

Definitions and Abbreviations

Definitions and Abbreviations

The following tables contain scientific terms and measures, some of which may require explanation.

Action Level:

The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Avg:

Regulatory compliance with some MCLs are based on running annual average of monthly samples.

Level 1 Assessment:

A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment:

A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

Maximum Contaminant Level or MCL:

The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal or MCLG:

The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum residual disinfectant level or MRDL:

The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum residual disinfectant level goal or MRDLG:

The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

MFL

million fibers per liter (a measure of asbestos)

mrem:

millirems per year (a measure of radiation absorbed by the body)

na:

not applicable.

NTU

nephelometric turbidity units (a measure of turbidity)

pc/L

picouries per liter (a measure of radioactivity)

Definitions and Abbreviations

ppb:	micrograms per liter or parts per billion
ppm:	milligrams per liter or parts per million
ppq	parts per quadrillion, or picograms per liter (pg/L)
ppt	parts per trillion, or nanograms per liter (ng/L)
Treatment Technique or TT:	A required process intended to reduce the level of a contaminant in drinking water.

Information about your Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

You may be more vulnerable than the general population to certain microbial contaminants, such as *Cryptosporidium*, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Information about Source Water

TCEQ completed an assessment of your source water, and results indicate that some of our sources are susceptible to certain contaminants. The sampling requirements for your water system is based on this susceptibility and previous sample data. Any detections of these contaminants will be found in this Consumer Confidence Report. For more information on source water assessments and protection efforts at our system contact [insert water system contact][insert phone number]

2024 Water Quality Test Results

Disinfection By-Products	Collection Date	Highest Level Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contamination
Halooacetic Acids (HAA5)	2024	19	19.2 - 19.2	No goal for the total	60	ppb	N	By-product of drinking water disinfection.

*The value in the Highest Level or Average Detected column is the highest average of all HAA5 sample results collected at a location over a year

Total Trlhalomethanes (TTHM)	2024	4	4.3 - 4.3	No goal for the total	80	ppb	N	By-product of drinking water disinfection.
------------------------------	------	---	-----------	-----------------------	----	-----	---	--

*The value in the Highest Level or Average Detected column is the highest average of all TTHM sample results collected at a location over a year

Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contamination
------------------------	-----------------	------------------------	-----------------------------	------	-----	-------	-----------	--------------------------------

Barium	2024	0.181	0.181 - 0.181	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Fluoride	2024	0.53	0.53 - 0.53	4	4.0	ppm	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.

Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contamination
Beta/photon emitters	05/18/2022	10.2	10.2 - 10.2	0	50	pCi/L*	N	Decay of natural and man-made deposits.

*EPA considers 50 pCi/L to be the level of concern for beta particles.

Combined Radium 226/228	05/18/2022	2.65	2.65 - 2.65	0	5	pCi/L	N	Erosion of natural deposits.
-------------------------	------------	------	-------------	---	---	-------	---	------------------------------

Gross alpha excluding radon and uranium	05/18/2022	6.5	6.5 - 6.5	0	15	pCi/L	N	Erosion of natural deposits.
---	------------	-----	-----------	---	----	-------	---	------------------------------

Disinfectant Residual

A blank disinfectant residual table has been added to the CCR template, you will need to add data to the fields. Your data can be taken off the Disinfectant Level Quarterly Operating Reports (DLQOR).

Disinfectant Residual	Year	Average Level	Range of Levels Detected	MIRDL	MIRDLG	Unit of Measure	Violation (Y/N)	Source in Drinking Water
4 th Qtr (Oct – Dec)	2024	1.61	0.57 – 2.28	4	4	mg/L	N	
3 rd Qtr (Jul - Sep)	2024	1.41	0.38 – 2.81	4	4	mg/L	N	
2 nd Qtr (Apr – Jun)	2024	1.58	0.71 – 2.35	4	4	mg/L	N	
1 st Qtr (Jan – Mar)	2024	1.38	0.49 – 2.41	4	4	mg/L	N	
							ppm	Water additive used to control microbes. - Chlorine

UCMR5 – All test results are on the included test results pages

Lead Service Line Inventory

We have not located any taps or service lines that contain lead or galvanized piping with our water plant or distribution system. The full Lead Copper Service Line Inventory is accessible on our company website at this URL: [Canyon Park Lead & Copper Line Inventory | Canyon Park Water Supply Corporation](#)

Part 2. Inventory Summary Table ¹

When using the **Detailed Inventory** worksheet, the classifications in the Column "Entire Service Line Material Classification" (Column Q) will be used to calculate the total number of service lines for each of the four material classifications below. **Remember this is the classification for the entire service line.**

Service Line Material Classification	Definition	Total Number of Service Lines (REQUIRED to be reported under the LCRR) ^x
Lead	Any portion of the service line is known to be made of lead. ²	2
Galvanized Requiring Replacement (GRR)	The service line is not made of lead, but a portion is galvanized and the system is unable to demonstrate that the galvanized line was never downstream of a lead service line.	0
Non-Lead	All portions of the service line are known NOT to be lead or GRR through an evidence-based record, method, or technique.	503
Lead Status Unknown	The service line material is not known to be lead or GRR. For the entire service line or a portion of it (in cases of split ownership), there is not enough evidence to support material classification.	0
TOTAL		505

Canyon Park WSC Testing Results - 2024

Name* = Meets all TNI (2016 Standard) requirements

Maximum Contaminated Level

MCL

TX Dept State Health Services - All Metals (09.26.24)

	Results	MCL		MCL
Total Hardness as CaCO3	50.2 mg/L		Lead*	< 0.001 mg/L

Iron*	< 0.01 mg/L		Zinc*	0.0193 mg/L

TX State Health Services – Regulated Carbamates & Monitored Compounds (09.17.2024)

Regulated Carbamates

Aldicarb*	< 0.5 ug/L
Aldicarb sulfone*	< 0.8 ug/L
Aldicarb Sulfoxide*	< 0.5 ug/L
Carbofuran*	< 0.9 ug/L
Oxamyl*	< 2.0 ug/L

Monitored Compounds

Baygon	< 2.0 ug/L
Carbayl	< 2.0 ug/L
3-Hydrocarbofuran	< 2.0 ug/L
Methiocarb	< 4.0 ug/L
Methomyl	< 2.0 ug/L

TX State Health Service – Herbicides (09.12.2024)

Regulated Compounds

2,4-D*	< 0.1ug/L
2,4,5-TP (Silvex)*	< 0.2 ug/L
Pentachlorophenol*	< 0.04 ug/L
Dalapon*	< 1 ug/L
Dinoseb*	< 0.2 ug/L
Picloram*	< 0.1 ug/L

Monitored Compounds

Acifluorfen	< 1.0 ug/L
Bentazon	< 2.0 ug/L
Chloramben	< 1.0 ug/L
2,4-DB	< 2.0 ug/L
Dicamba	< 1.0 ug/L
3,5-Dichlorobenzoic acid	< 1.0 ug/L
Dichlorprop	< 2.0 ug/L
Quinclorac	< 1.0 ug/L
2,4,5-T	< 0.5 ug/L

TX Dept State Health Services – Volatile Organic Compounds (09.05.2024)

Regulated Compounds

Benzene*	< 0.5 ug/L
Carbon tetrachloride*	< 0.5 ug/L
Monochlorobenzene*	< 0.5 ug/L
0-Dichlorobenzene*	< 0.5 ug/L
Para-Dichlorobenzene*	< 0.5 ug/L
1,2-Dichloroethane*	< 0.5 ug/L
1,1- Dichloroethane*	< 0.5 ug/L
cis-1,2-Dichloroethane*	< 0.5 ug/L
trans-1,2-Dichloroethane*	< 0.5 ug/L
1,2-Dichloropropane*	< 0.5 ug/L
Dichloromethane*	< 0.5 ug/L
Ethylbenzene*	< 0.5 ug/L
Styrene*	< 0.5 ug/L
Tetrachloroethylene*	< 0.5 ug/L
Toulene*	< 0.5 ug/L
1,2,4-Trichlorobenzene*	< 0.5 ug/L
1,1,1-Trichloroethane*	< 0.5 ug/L
1,1,2- Trichloroethane*	< 0.5 ug/L
Trichloroethylene*	< 0.5 ug/L
Vinyl chloride*	< 0.5 ug/L

Monitored Compounds

Chloroform	< 1.0 ug/L
Bromodichloromethane	1 ug/L
Dibromodichloromethane	2.2 ug/L
Bromoform	3.4 ug/L
Dibromomethane	< 1.0 ug/L
1,3-Dichlorobenzene	< 1.0 ug/L
1,1-Dichloropropene	< 1.0 ug/L
1,1-Dichloroethane	< 1.0 ug/L
1,1,2,2-Tetrachloroethane	< 1.0 ug/L
1,3-Dichloropropane	< 1.0 ug/L
Chloromethane	< 2.0 ug/L
Bromomethane	< 2.0 ug/L
1,2,3-Trichloropropane	< 1.0 ug/L
1,1,1,2-Tetrachloroethane	< 1.0 ug/L
Chloroethane	< 2.0 ug/L
2,2-Dichloropropane	< 1.0 ug/L
2-Chlorotoluene	< 1.0 ug/L
4-Chlorotoluene	< 1.0 ug/L
Bromobenzene	< 1.0 ug/L
cis-1,3-Dochloropropene	< 1.0 ug/L

Xylenes (Total)*	< 0.5 ug/L	trans-1,3-Dochloropropene	< 1.0 ug/L
		1,2,4-Trimethylbenzene	< 1.0 ug/L
Other Compounds		1,2,3-Trichlorobenzene	< 1.0 ug/L
Acetone	< 10 ug/L	n-Propylbenzene	< 1.0 ug/L
Acrylonitrile	< 10 ug/L	n-Butylbenzene	< 1.0 ug/L
2-Butanone (MEK)	< 10 ug/L	Naphthalene	< 1.0 ug/L
Carbon disulfide	< 1.0 ug/L	Hexachlorobutadiene	< 1.0 ug/L
Ethylmethacrylate	< 1.0 ug/L	1,3,5-Trimethylbenzene	< 1.0 ug/L
2-Hexanone	< 1.0 ug/L	4-Isoproyltoluene	< 1.0 ug/L
Iodomethane	< 5.0 ug/L	Isoproylbenzene	< 1.0 ug/L
Methyl methacrylate	< 1.0 ug/L	t-Butylbenzene	< 1.0 ug/L
4-Methyl-2-pentanone (MIBK)	< 2.0 ug/L	s-Butylbenzene	< 1.0 ug/L
Methyl-t-butyl ether (MTBE)	< 0.5 ug/L	Trichlorofluoromethane	< 2.0 ug/L
Tetrahydrofuran	< 5.0 ug/L	Dichlorodifluoromethane	< 2.0 ug/L
		Bromochloromethane	< 1.0 ug/L

TX Dept State Health Services – Trihalomethanes by GC/MS (09.12.2024)

Chloroform	<1.0 ug/L
Bromodichloromethane	< 1.0 ug/L
Dibromochloromethane	1.9 ug/L
Bromoform	2.4 ug/L
Total Trihalomethanes*	4.3 ug/L

TX Dept State Health Services – Single Mineral (09.03.2024)

Total Cyanide*	< 0.1 mg/L
----------------	------------

TX Dept State Health Services – All Minerals (09.03.2024)

Field pH Result	7.8 pH	Fluoride*	0.53 mg/L
Conductance @ 25.0 Centigrade*	1020 umho/cm	Chloride*	150 mg/L
Phenolphthalein Alkalinity as CaCO3	< 10 mg/L	Sulfate*	8 mg/L
Total Alkalinity as CaCO3	258 mg/L	Total Dissolved Solids*	608 mg/L
Bicarbonate	315 mg/L	Nitrate*	< 0.05 mg/L
Carbonate	< 10 mg/L		

TX Dept State Health Services – Haloacetic Acids (09.12.2024)

Regulated Compounds

Monochloroacetic acid	18.2 ug/L
Dichloroacetic acid	< 1.0 ug/L
Trichloroacetic acid	< 1.0 ug/L
Monobromoacetic acid	< 1.0 ug/L
Dibromoacetic acid	1.0 ug/L
Total HAA5*	19.2 ug/L

Monitored Compounds

Bromochloroacetic acid	< 1.0 ug/L
Dalapon	< 1.0 ug/L
